

Plan to choose at least one area of key growth for each child, whether you are homeschooling them or not. This becomes the one, "must do", and "concentrate on" subject to plan immediately! This is the one area that you focus on especially when there are hard days and not much is progressing. Try to pay attention to this ONE area of growth and you will find that the rest of the curriculum will come along for the ride. For example, if multiplication is tripping them up, then that gets tons of focus this year with games, books, mommy one-on-one or a tutor.
